Node.js Introduction

What is Node.js?

- Node.js is an open source server framework
- Node.js is free
- Node.js runs on various platforms (Windows, Linux, Unix, Mac OS X, etc.)
- Node.js uses JavaScript on the server

Why Node.js?

Node.js uses asynchronous programming!

https://www.w3schools.com/nodejs/nodejs_intro.asp

1.0 What is node.js?

Javascript on Server

Node.js is an open-source, runtime environment for developing **server-side and network applications in JavaScript**.

Its **event-driven architecture and non-blocking I/O model** makes it ideal for building **real-time applications that run across distributed devices**.

1.1 What is node.js?

Node.js®에 대해서

비동기 이벤트 주도 JavaScript 런타임으로써 Node는 확장성 있는 네트워크 애플리케이션을 만들 수 있도록 설계되었습니다. 다음 "hello world" 예제는 다수의 연결을 동시에 처리할 수 있습니다. 각 연결에서 콜백이 실행되는데 실행할 작업이 없다면 Node는 대기합니다.

```
const http = require('http');

const hostname = '127.0.0.1';
const port = 3000;

const server = http.createServer((req, res) => {
  res.statusCode = 200;
  res.setHeader('Content-Type', 'text/plain');
  res.end('Hello World\n');
});

server.listen(port, hostname, () => {
  console.log(`Server running at http://${hostname}:${port}/`);
});
```

1.2 What is node.js?

- **Node.js® is a JavaScript runtime built on Chrome's V8 JavaScript engine.**
- **Node.js uses an event-driven, non-blocking I/O model that makes it lightweight and efficient.**
- **Node.js' package ecosystem, npm, is the largest ecosystem of open source libraries in the world.**

1.3 Non-blocking IO

Blocking Code

```
var contents = readFile('/path/some/file.txt');  
console.log(contents);  
console.log('Another independent operation');
```

Non-Blocking Code

```
var contents = readFile('/path/some/file.txt', function(err, contents){  
    console.log(err || contents);  
});  
  
console.log('Another independent operation');
```

2. 등록된 포트는 1024~49151 까지입니다. (사용가능)

3. 동적 및/또는 개인 포트는 49152~65535 까지입니다. (사용가능)

1. listen **EADDRINUSE** 오류

-사용중인 포트이거나 포트를 중지시키지 않고 종료시켰을 경우 계속 포트가 사용되고 있는데 연결 시키려고 할 때 나타나는 오류

```
Server Running on 3000.  
Launch http://localhost:3000

2. 해결 방법

- (1) cmd창에서 **netstat -ano**를 입력한 후, 로컬주소에서 사용 중인 포트 번호를 확인
- (2) 사용중인 포트번호를 확인하고 그 해당포트의 **pid번호를 확인**한다.

- Node module : **aanninfo.js**
- Upload folder: **aax-nn-rpt02**

[practice] local module : aanninfo.js

index_aann.js uses local module **aanninfo.js** in start subfolder.

```
1 // index_aann.js
2
3 var myinfo = require('./aanninfo');
4
5 myinfo("aa00", "Redwoods", '010-1234-5678');
6
7 myinfo("aa55", "Comsi", '010-5678-1234');
```

My Info

[practice] local module : aanninfo.js

How to make aanninfo.js in start subfolder.

1. Make local module – aanninfo.js
2. Call aanninfo.js from index_aann.js.
3. Capture your result.

```

1 // aanninfo.js
2
3 module.exports = function(id, name, phone) {
4     console.log("My Info");
5     console.log("ID : " + id);
6     console.log("Name : " + name);
7     console.log("Phone : " + phone + "\n");
8 }
  
```
